

Video title:

Do you need a computer science degree to succeed at CyberFirst?

Transcript:

Often people think that you need to be a computer scientist to succeed, and that's not necessarily true. Some of our CyberFirst students at this moment in time are doing physics or maths degrees, and STEM is really important; but we also have student who're doing humanities degrees, like international relations. They all bring something different. If we continue to recruit from the same pool of people, the same backgrounds, the same educational qualifications, we'll potentially just think about things in the same way. But by bringing in a diverse mix, all of a sudden its more of a melting pot of ideas, and that should help us to develop our security solutions and our security services in the future.
