

Video title:

Why is diversity important in cyber?

Transcript:

Diversity of thought propels organisations forward and any team forward. In cyber security, the landscape is always evolving, you cannot stay stuck, so if you are always pulling from the same pool, the same mindset and using the same approach, you're going to fall behind. Ultimately, the cyber criminals aren't discriminating. They are pulling from anyone, from anywhere, to get what they need for it. So, if we don't have the same diversity of thought as they do, we're always going to be behind them.
