

Video title:

Degree apprentice, Elena

Transcript:

I mean I've been able to do software dev, I've done networking, I've done hardware stuff, which I'm doing at the minute and has just been so interesting. It's that sort of more hardware, technical, hands-on like electronic stuff that I think a lot of people don't think is classed as cyber security, because all you hear is software and networking and all of that other jargon, that you actually then forget about the core part, which is the hardware that you use: your phones, your computers, even your printers, your smart fridges. Everything needs to be secure. So, being able to sort of work and look at that aspect of cyber security over the last year has been so interesting.
